

BUILDING 

BUILDING THE FOUNDATION FOR NEW YORK'S FUTURE

Requires a 2019-2024 Multi-Year Capital Plan

State University Construction Fund

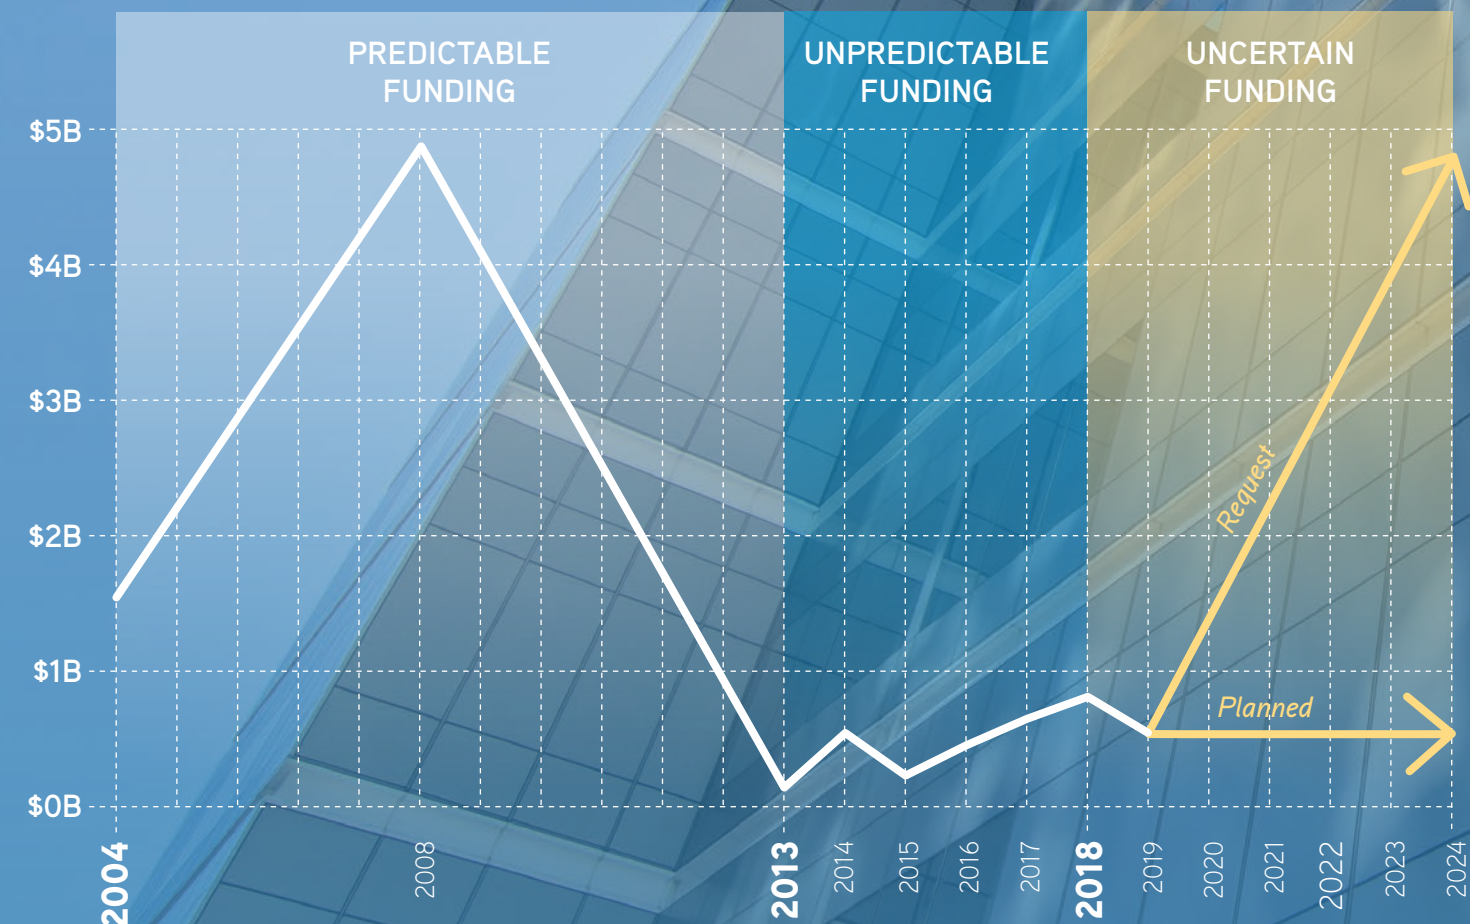

CAPITAL INVESTMENT IS THE FOUNDATION FOR SUCCESS

From 1998 to 2013, predictable funding resulted in the completion of hundreds of critical construction projects that maintained core infrastructure, enabled campuses to achieve their academic missions, and facilitated SUNY’s overarching goals of student success, and sustained enrollment.

SUNY’s State-operated campuses account for 40 percent of all state-owned assets, with more than 1,800 academic buildings covering 62M gross square feet. Nearly half of these buildings were constructed between 1965 and 1975, and the average age of all academic buildings is 49 years.

An aging physical plant of this size requires continuous investment to address ongoing maintenance needs, achieve a good state of repair, ensure student safety, modernize facilities, and provide state-of-the-art technology. Capital investment in SUNY is economic development in New York State.

Thanks to New York State investment, SUNY has made considerable progress, but there is ***still much more to be done!***

The SUNY Footprint, 1900-2020

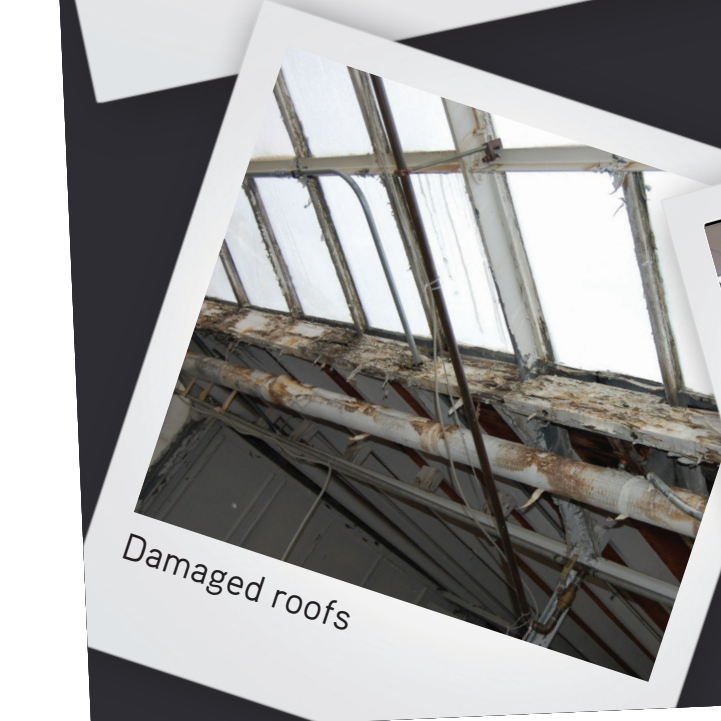

Gross Square Footage (GSF) Added in 5-Year Intervals

Decaying masonry

Rotting Infrastructure

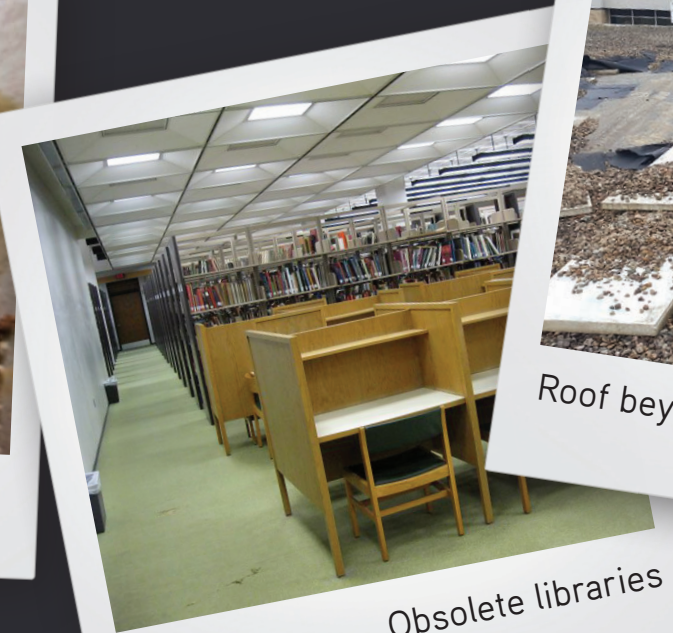

Damaged roofs

Leaking roofs

Electrical equipment past useful life

Obsolete libraries

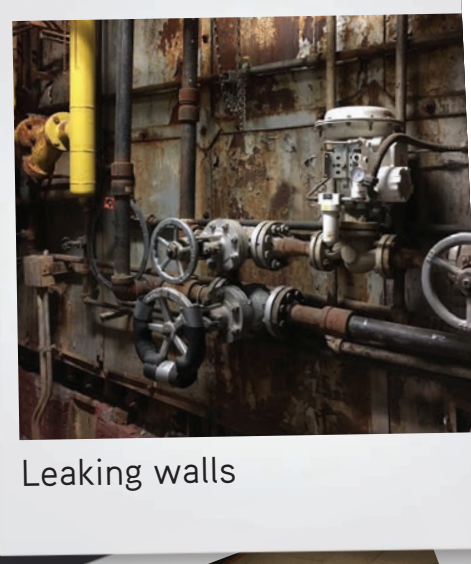

Roof beyond usable life

Dilapidated classrooms

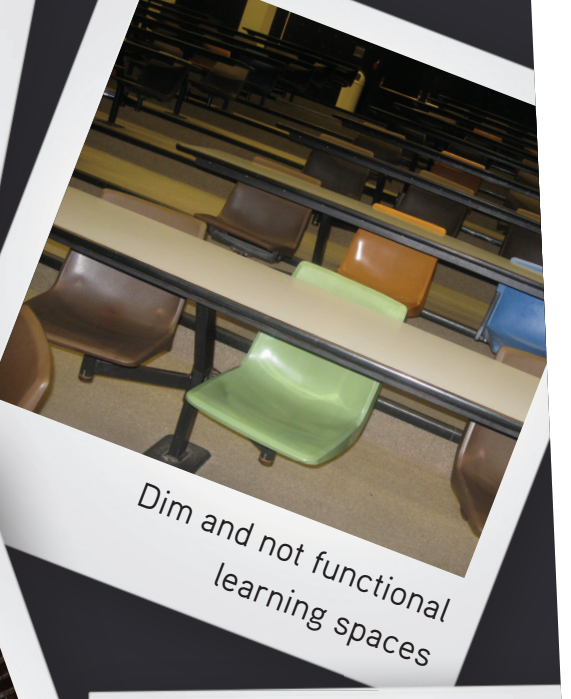

Crumbling infrastructure

Leaking walls

Worn out laboratories

Dim and not functional learning spaces

SUSTAINABLE SUNY

SUNY has reduced its greenhouse gas emissions by 27 percent compared to 1990 levels while increasing gross square footage by 38 million. SUNY is committed to reducing its campus operating costs and carbon footprint, and increasing awareness of sustainable living.

The requested funding will facilitate SUNY's inclusion of deep energy retrofits into planned renovations and new construction to further promote resiliency and sustainability.

Oswego's Robert S. Shineman Richard Center for Science, Engineering & Innovation achieved LEED Gold.

High performance building envelope with glazing and shading reduces direct sunlight into the building while increasing daylight.

Wind turbine and photovoltaic panels provide renewable electricity to supplement grid power.
